

kACE² Indices

Introducing Kalahari's new kACE² Indices Solutions

kACE² Indices is a single technology solution used for the real-time processing, calculation and onward distribution of high quality index trading data. It streamlines the calculation of an index business price-information data, generates operational efficiencies, and is appropriate for any company that calculates global and regional indices for markets around the world.

Built using the powerful and easy to use kACE² analytics platform, kACE² Indices was designed to immediately improve the quality and speed of calculating and distributing global indices price-information - and it's completely scalable should your index business expand and grow.

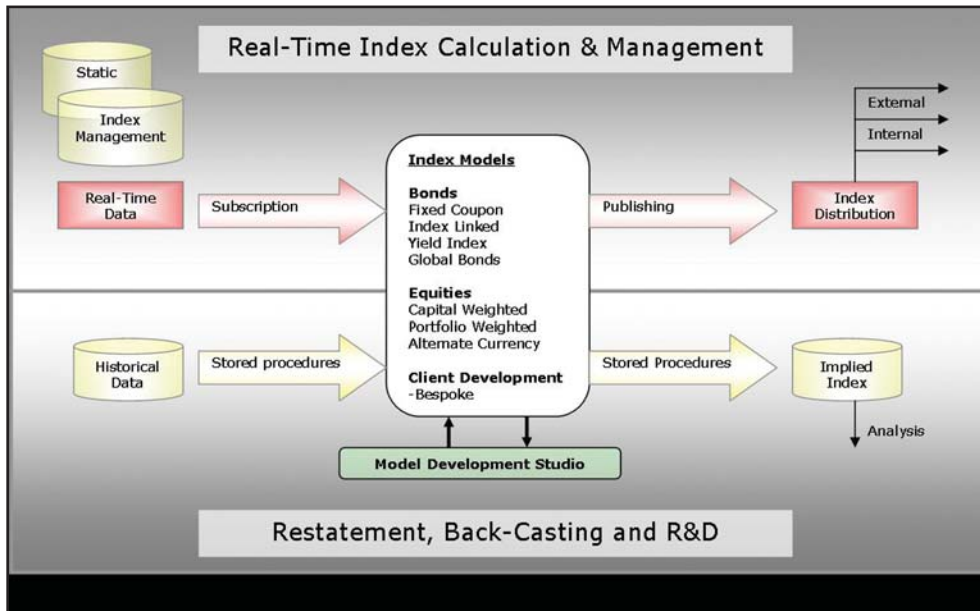

Benefits:

- Ownership of analytics powering the calculation engine
- In-house bespoke index calculation capability without third party intervention
- Rapid and flexible addition of new indices
- High performance and scalable solution
- Rapid Application Development (RAD)

As today's investor appetite for customised indices (including ETF's) continues to grow, many Index businesses look to their technology infrastructure to help meet current and future demand. kACE² Indices provides sophisticated, yet easy to use, modeling tools that will allow the rapid in-house development of any custom index, in any currency, market, region or sector.

Key Features:

- Index Development Environment
 - A visual programming modeling environment that can be used by non-programmers to develop custom index solutions
 - Flexibility of spreadsheets
 - Performance and reliability of out-of-the-box solutions
 - Allows customer to take ownership of development

- **Index Service**
 - Robust solution for index calculation and maintenance
 - Scalable, using multiple CPUs and servers
 - External exception reporting mechanisms
 - 365 day / 24 hour up-time
- **Restatement & Back Casting Service**
 - Use of index service for playback of historical or synthetic data
 - Use of database agnostic ODBC connections and stored procedures

Kalahari has been providing real-time price discovery, analytics and data publishing software solutions since 1987. Our solutions are used by many of the world's leading inter dealer brokers, banks, exchanges and other financial institutions to help drive their daily trading strategies. Kalahari is committed to designing fast, flexible and user-friendly products that help trading environments thrive.

We understand that our solutions may not meet your exact requirement, and so we provide a customisation service to ensure that the end product covers your precise needs.
